Fold-up 600 3-pt Rotowiper.

Why remove weeds?

Weeds remove moisture and trace elements from the soil and smother crops or pastures. This results in lower productivity and profit.

Rotowiper® is an innovative herbicide applicator that has been manufactured and developed over many years using very high quality standards. There is a range of Rotowipers® to suit many applications – from small holdings to large areas of grasslands or crops.

Rotowiper® works because it has a rotating roller which is covered with a carpet which is especially manufactured and tested for Rotowiper®. Herbicide is applied to the carpet within the confines of a set of shields – making spray drift a problem of the past. The combination of an adjustable height and rotating roller means you only apply herbicide to the targeted weeds, not your pasture or crop. Herbicide is applied to the underside of the leaf which is the most receptive part of the weed. This of course gives a better kill and less herbicide is used.

The WCF range is suitable for towing behind ATV's, utility vehicles and tractors. There is a model to suit most applications from hill country to flat land.

The LMU range is tractor mounted and is hydraulically driven.

Rotowiper® really does work and will be your favourite weapon against weeds. Rotowiper® will improve your productivity and profits!

ROTOWIPER - The Features and Benefits

'The genuine weedwiper'

- ✔ Environmentally friendly - no spray drift. Rotowiper® uses much less herbicide than blanket spraying.
- ✔ Rotation of the large roller prevents dripping and ensures a constant supply of herbicide.
- ✔ Uniquely designed and tested roller material provides excellent chemical transfer.
- ✔ Adjustable height means herbicide is only applied to the targeted weeds - not to your pasture or crop. Herbicide use is relative to the density of weeds.
- ✔ The herbicide is applied to the underside of the leaf which is the most receptive part, giving the most effective kill. Rotowiper® is compatible with most herbicides which allows you to choose which is the best suited herbicide for your climate and conditions.
- ✔ Weed size determines the amount of herbicide used.
- ✔ Design and use of materials gives strength to the Rotowiper® yet the machine remains lightweight which is vital on uneven surfaces.
- ✔ Long life with low maintenance.
- ✔ WCF has large diameter wheels to ensure a smooth ride and minimum vibration.
- ✔ WCF - Safety. Widely spaced wheels give greater stability on undulating land.
- ✔ WCF - Forward mounted tank assists safety and traction when towed by an ATV.

Shown with optional hand wash

LMU 290 Hydraulic Drive, Front or rear mount.

ROTOWIPER - Small investment, multiple uses

'The genuine weedwiper'

Rotowiper® only uses a small amount of herbicide compared to blanket spraying

Fold-up 600 3-pt Rotowiper .

- ✔ Lower costs.
- ✔ Fastest way to control unwanted weeds.
- ✔ More environmentally friendly.
- ✔ Long life - Rotowiper® is manufactured to last.
- ✔ Worldwide market leader.
- ✔ Manufactured over 22 years.
- ✔ Rotowiper® is the recipient of many awards.
